Account Creation

WSO2

Introduction

This document presents the steps required to create an account on the TypingDNA platform.

Creating an account

1. Access the following link: https://www.typingdna.com/clients/signup

Complete the form with the first name, last name, email address and a password.

Read the website terms, standard service terms and privacy policy. The user is required to agree with these terms in order to access the TypingDNA services.

2. Complete the Account security (2FA) setup by typing the phrase presented on the screen twice. We strongly recommend that you perform this step. This step can also be skipped by selecting the "Set up later" button.

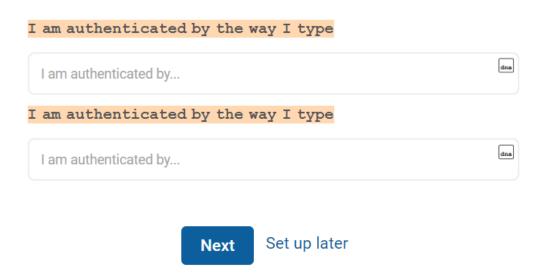

Click the "Next" button once the phrase has been entered twice.

3. Complete the Account security (2FA) setup by providing your mobile phone number or email. We strongly recommend that you perform this step. This step can also be skipped by selecting the "Set up later" button.
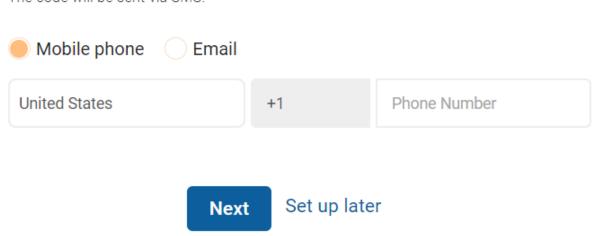

$\oslash$ Account created!

Account security (2FA)

Whenever you log in from an unknown browser, we will validate you with your typing pattern or a one-time password (OTP).

Verification code (OTP) $^\odot$
The code will be sent via SMS.

🔘 Mobile phone   ⚪ Email

United States	+1	Phone Number

Next   Set up later

4. Verify your account by providing the OTP Code that was sent to your mobile phone or email.

Account verification

Please enter the verification code sent to your email

OTP Code

Verify   Resend code

5. Proceed to log in to the account.
